Students become versed in areas such as air pollution control, wastewater treatment, solid waste management, the ecological preservation of the environment, soil pollution, environmental hormones, noise and vibration control, and equipment design

**- Occupational Category**

Water Pollution Environmental Engineer, Air Pollution Environmental Engineer, Soil Environment Engineer, Bioncist, Water Pollution Environmental Industrial Engineer

**◎Department of Health and Safety Engineering**

**- Characteristics**

The objective of this department is to produce specialists in the areas of fire, explosions and damage control by giving them a profound understanding of chemicals, industrial hygiene, new materials, mechanical and electrical systems, and construction engineering. Graduates have various career options in industries and relevant institutes by earning engineer licenses in industrial safety management, occupational health & safety, construction, gas, and fire equipment.

**- Occupational Category**

Industrial hygiene Engineer, Industrial Safety Engineer, Fire Fighting Equipment Engineer, Ergonomics Engineer

**◎Department of Architectural Engineering**

**- Characteristics**

The Architectural Engineering Program looks at the engineering and science pertinent to the buildings, such as Structural Engineering, Building Construction, and Environmental Planning.

We offer practical architectural engineering programs where we also educate ethical awareness issues. Group activities foster cooperation and enhancing an understanding of foreign cultures puts them in a good direction for the future. Teaching architectural design, practical technical problem solving, economics and finance strengthens the students' foundation as an engineer. Collaboration with industries exposes the students to real-life situations.

**- Occupational Category**

Architect, Building Facilities Engineer, Landscape Architecture Engineer,

Urban Planning Engineer, Concrete Engineer, Cadastral Surveying Engineer, Quality Control Engineer

**◎Department of Civil Engineering**

**- Characteristics**

Civil Engineering is an academic branch of academics which improves and maintains nature and the environment and makes life more convenient. It has a long history, as well as modern cutting-edge applications, as the skill to construct basic social facilities of a country. It deals with planning, design, construction and maintenance of structures such as long roads, rails, dams, ports, airports, subways, bridge, plants and utting and social overhead capital facilities which constitute the basic infrastructure for human civilized activities. As a means of studying relevant theories and techniques, this can be a fascinating major that can give students a feeling of accomplishment if they are interested in the public good.

In the Semyung University Department of Civil Engineering, four laboratories allow students to get site specific engineering experiences and have a more fruitful campus life, thus giving undergraduate students chances to participate in civil engineering research activity.

**- Occupational Category**

Civil Engineer, Land Surveyor, Urban Planning Engineer, Concrete Engineer, Cadastral Surveying Engineer

**e. Division of Medicine and Health Services**

**◎Department of Clinical Laboratory Science**

**- Characteristics**

Pathology is a branch of medicine, which deals with the examination and analysis of the causes of diseases. Pathologists are essential members of hospital laboratories, performing clinical laboratory diagnostic procedures for the diagnosis, treatment and prevention of diseases. The curriculum is designed to teach the theory and practice of pathology over the course of four years. The basic subjects of pathology are introduced in the first year, and the practice of Pathology procedures will be taught in the second, third and fourth year.

**- Occupational Category**
